Education

BEng
Software Engineering
University of Calgary
September 2021 – April 2025

Key Skills

Python
HTML/CSS
JavaScript
SQL
React
C/C++
Git
Linux

Objective

My objective is to work and apply my own knowledge as a Software Engineer and mix that with real world applications and experience so I can further my own skills. I am also looking to further improve my teamworking skills by working with a team to ensure company advancement and growth.

Experience

Summer 2022
Student Researcher • University of Calgary

November 2022
Hackathon • Code the Change YYC

Working as a student researcher really introduced me to team collaboration through GitHub and the use of repos and push and pull requests and the importance of working as a unit to be as efficient as possible. In the Hackathon, my main part was creating code for a website we wanted to use in our final presentation, but I also helped with brainstorming and final execution of code.

Relevant Classes

- Data Practices and Management (SQL)
- Object Oriented Principles for Software Development (currently taking)
- Full Stack Web Development (currently taking)
- Practical Data Structures and Algorithms (currently taking)

Projects

Currently, I am working on creating a new website for Health Help Alberta, since they wanted a more professional look for their organization. It's still unfinished, but I put a solid amount of work into this as a passion project.
